JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

IV. An Account of a Stone bred at the Root of the Tongue, and causing a Quinsie. Communicated by Mr. Bonavert.

THE Stone Fig. 3. came from *Tho. Wood of Nepe-care-street* in *Wrotham*, he was troubled with a Quinsie, he neglected Advice till he could hardly swallow any Liquid ; and when I went to see him, I found the Tumour tend to Suppuration inwardly about the Root of his Tongue on the Right Side, though it was almost as big as an Egg outwardly, but without any Sign of Suppuration there : Wherefore I ordered him Maturing Gargles ; and the next Day sent my Man, and bid him advise him to endeavour to break it with his Finger, which the Man effected, and brought out of his Mouth near the Quantity of a quarter of a Pint of Matter, and with it at last the Stone ; he had likewise a Ranula, and before he had broke the Tumour, and spit out the Corruption he could hardly speak. I believe this Stone to be of the same Nature as those generated in the Kidneys and Bladder.

The Weight of this Stone in Air is 7 gr. The Weight of the same in Water is 3 $\frac{1}{4}$; and its specifick Weight compar'd with Water is near as 1 $\frac{2}{5} \frac{1}{2}$ to one.
